

# Strategic Research and Innovation Agenda

## EU Call for Project Proposals

Gautam Ramesh 7026787, Malena Wilken 7022282

8. Dezember 2025

- 1 **Why** the EU funds projects
- 2 European long-term budgeting
- 3 **Who** checks the proposals
- 4 **How** the evaluation works
- 5 The three main criteria: **Excellence, Impact, Implementation**
- 6 Example for SRIA
- 7 A simple **smart traffic** example
- 8 **How students** can join such projects

# Why the EU funds projects

# EU Research and Missions

Gautam

The **European Union** invests money in research and innovation.

EU **missions** focus on big problems like climate, cancer, oceans, cities and healthy soil.

# European long-term budgeting

# EU institutions and bodies I

Malena

**European Commission**

which makes proposals

**European Parliament**

representing EU citizens

**Council of the European Union**

representing EU countries

Abbildung: EU institutions and bodies [Com25c]

The EU budget combines resources at EU level and **enables EU countries to achieve more together than they could if they acted alone**, for instance financing infrastructure or research projects [Com25c].

# EU institutions and bodies II

Malena

Abbildung: European Commission makes proposals for EU investments [Com25c]

- proposes the Multiannual Financial Framework (MFF)
- Resources Decision
- sets rules for specification of EU investments [Com25c]

# EU institutions and bodies III

Malena

2

## Discussions and negotiations start

Abbildung: Council and Parliament of the EU negotiate [Com25c]

- Council of the EU discusses the proposals until all EU countries agree and adopts its positions
- In parallel, the European Parliament discusses the proposals and adopts its positions [Com25c]

# Long-term budget I

Malena

- The **Multiannual Financial Framework (MFF)** defines the EU's long-term spending priorities and limits
- The current MFF covers the period **2021–2027**
- Together with NextGenerationEU, the long-term budget amounts to around **€2 trillion** [Com25a]

# Horizon Europe I

Malena

- **Horizon Europe** — Budget: **€95.5 billion**. EU research and innovation strategic plan (2021–2027) focusing on climate action, United Nations Sustainable Development Goals (UN SDGs), competitiveness, and knowledge creation [eur20]

Figure: Horizon Europe [eur20]

# Horizon Europe Partnerships I

Malena

- The full portfolio consist of **60 European Partnerships**.
- **Partnership areas:**
  - Climate, energy and mobility
  - Culture, creativity and inclusive society
  - Digital, industry and space
  - Food, bioeconomy, natural resources, agriculture and environment
  - Health [Com25a]

# From Call to Project

Gautam

- The EU publishes a **call text** with a topic and rules.
- A group of partners writes a **project proposal**.
- They send the proposal on time through the online portal.
- After the deadline, the proposal enters the **evaluation process**.
- Only the best proposals become **funded projects**.

# Who checks the proposals

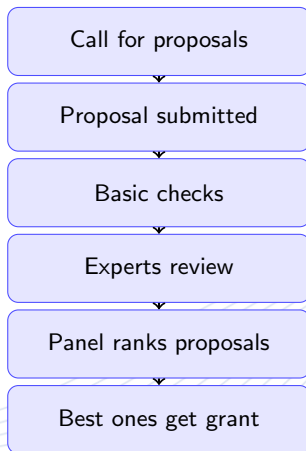

# Who Evaluates the Proposal?

Gautam

- Proposals are checked by **independent experts**.
- Experts come from **different countries** and backgrounds.
- They are chosen for their **knowledge** in the topic.
- They must follow **conflict of interest** rules (they cannot judge their own project).
- Each proposal is read by **several experts**, not only one person.

# Evaluation Pipeline

Gautam

Each step removes proposals that do not fit the rules or have low quality.

# Class Evaluation I

Gautam

An example project develops an **affordable maritime security system** that allows **small patrol boats to work together** with **long-endurance drones** and **underwater robots**. By combining all their **sensors and information into one platform**, small vessels can perform missions that normally require large and costly naval ships. The system gathers data from satellites, land and sea sensors, and unmanned vehicles, merges it into one clear operational picture, and **supports better decision-making** in command centres. It will be tested in large, realistic demonstrations across multiple scenarios. The timeframe of this project is set to **18 month** within a budget of **5 Million €**.

# How the evaluation works

# Scoring System

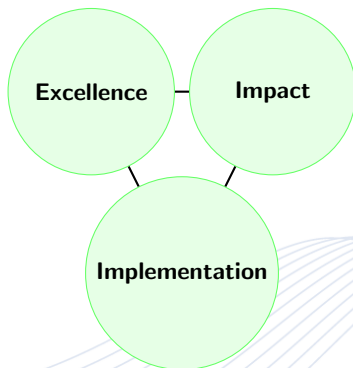

Gautam

- Experts give scores from **0** (very poor) to **5** (excellent).
- Scores are given for each **criterion**.
- A proposal must reach a **minimum score** to stay in the game.
- Later, experts meet and agree on a **common score**.
- Then the EU creates a **ranked list** from the best to the worst.

# The three main criteria: **Excellence, Impact, Implementation**

# Three Main Evaluation Criteria

Gautam

Every proposal is judged on these three **pillars**.

# Excellence: The Idea

Gautam

- The proposal must start with a **simple and clear problem**.
- It must explain what people **already know** about this problem.
- It must show what is **missing** or what is not solved yet.
- It should have **clear goals** that the team wants to reach.
- The idea should follow a **logical plan** and make sense.

# Excellence: The Method

Gautam

- The proposal must show **how** the team will work.
- It should list the **tools** and **techniques** they will use.
- It must explain **why** these tools are the right choice.
- It should say how they will **collect** and **study** data.
- It must mention possible **problems** and how they will solve them.

# Impact: The Change

Gautam

- Describes what will **change** if the project is successful.
- Links the project to **EU missions** or strategies.
- Explains who will **benefit** and how.
- Gives simple **numbers** to measure success (for example fewer accidents, less energy use).

# Impact Plans: Use and Communication

Gautam

- Shows how results will be **used** after the project (for example product, service, policy).
- Explains how results will be **shared**: reports, websites, open events, training.
- Talks about the **target groups**: cities, companies, citizens, students.
- Makes sure the project does not end in a **drawer**.

# Implementation: Work Plan

Gautam

- Breaks the project into **work packages**.
- Each work package has tasks, a leader and a time period.
- Shows a simple **timeline** (Gantt style).
- Explains how partners will **manage** the project: meetings, reports, risk checks.

# Implementation: The Team

Gautam

- A good consortium mixes:
  - **Universities** (knowledge)
  - **Companies** (market and products)
  - **Cities or users** (real-life testing)
- Each partner has a **clear role**.
- The coordinator has experience in **project management**.

# Short Overview of the Three Criteria

Gautam

<b>Excellence</b>	Quality of the idea and method. Clear problem and clear objectives.
<b>Impact</b>	Useful change in society or the market. Strong link to EU goals.
<b>Implementation</b>	Realistic work plan, good team and management.

# Example for SRIA

# Example for an SRIA I

Malena

# Example Project: Smart Traffic

Gautam

- Goal: make a city **safer** at busy crossings.
- University builds an **AI model** to predict risky situations.
- Company builds **smart cameras** and software.
- City installs the system at real junctions.

# A simple **smart traffic** example

# Smart Traffic Project and the Criteria

Gautam

- **Excellence:** clear accident problem, new AI-based solution.
- **Impact:** fewer injuries, supports green and smart city mission.
- **Implementation:** clear work packages, 3-year plan, partners with real responsibilities.

# Typical Weak Points in Proposals

Gautam

- Problem is **not clear** or too broad.
- Many nice words but **no concrete impact**.
- Work plan looks **too optimistic** for the time and budget.
- Missing important partners (for example no city partner for a city project).
- Risks are ignored or only written in one short line.

# What Makes a Proposal Strong

Gautam

- Simple and **clear story** that everyone understands.
- Real **innovation**, but still realistic.
- Impact that matches **EU missions**.
- Work plan that looks **doable**.
- Team that has the **right skills**.

# Students in EU Projects

Gautam

- Students cannot be **main applicants**.
- But they can work inside a **university team**.
- They help with data, coding, tests and reports.
- This gives strong **experience** and a good CV.

# How students can join such projects

# How a Student Can Join a Project

Gautam

# Typical Student Roles

Gautam

- **Data work:** collecting, cleaning and simple analysis.
- **Programming:** small modules, scripts, dashboards.
- **Testing:** trying out prototypes in the lab or in the field.
- **Support:** helping with figures, slides and documentation.
- **Thesis:** writing a project-related bachelor or master thesis.

# Benefits for Students

Gautam

- Learn how real **EU projects** work.
- Build an **international network**.
- Gain experience that looks strong on a **CV**.
- Understand how research ideas become **funded projects**.

Thank You
